KF stainless steel maintenance_recycling_stewardship

stainless steel

1. MATERIAL

finish:

we prefer no 4 finished finish for most of our work, it shows fingerprints less than other finishes and is easy to maintain. We also use a bright annealed (BA) for some pieces.

2. CARE AND MAINTENANCE

product maintenance information:

care and maintenance of stainless steel surfaces:

clean with an approved stainless steel cleaner using a lint-free cloth, eg: 3m Cleaner And Polish Stainless Steel 200g (ca \$5.20) available from woolworths (other cleaners: SteelKleen stainless steel cleaner available from coles stores, fagersta or 3M stainless steel spray cleaners available from barbecues galore stores. mr sheen is an adequate alternative).

3. RESPONSIBLE CLEANING

do not use cleaners containing bleaching agents.

do not use steel wool (risk of embedding contaminant rust from non-stainless steel wool) or expose to steel dust (for example from workmen grinding mild steel nearby)

for minor scratches: use clean scotchbrite pads (eg: 3M 7447 hand pads) and rub in the linear polish direction. do not polish across grain of finish.

4. RECYCLING/STEWARDSHIP PROGRAM

please recognise the inherent value and easy recyclability of our stainless steel products.

this product should be returned to us at the end of its useful life. or arrange with us to have it collected at a negotiated transport fee.

We undertake to disassemble it here in our workshop and send the stainless steel to the local recycler Simsmetal who recycle the material for other stainless steel products.

*** Before resorting to recycling the product can be repolished a number of times to extend it's life significantly.**

designed and manufactured in australia.

local products support energy efficient agendas by radically reducing freight carbon footprint.
